4,5,6 year olds doing Algebra & Geometry & Reading 2-3 Grade Levels Above & Teenagers Learning Trades gets less Attention from Adults than a Pro Sports Game or Music Awards Night or Reality Show or Holidays where Adults can Barbeque & Play Music & have A Good Time.

While all that go on, children & teens are getting their confidence broken in classrooms, not understanding math word problems, not doing well in standardized tests, not able to relate their education to the real world, can't explain math steps on the board in front of the class, not really understanding their homework, and many things that don't have their parents full attention.

Children & Teens are exposed to material much earlier than previous generations. Many are getting very frustrated with school.

Without trades, even honor roll students will be at a disadvantage. Only reason I bring up honor roll students is because most people think they good to go with great grades. Without trade knowledge, they too are at a disadvantage.

Trades. What can you use your mind & hands to invent, create, build, manufacture & produce?

***--->>> Will your child/children--teens have trades when they graduate from high school?

Are you fine with them only having book knowledge knowledge?

Are you fine with them not having a trade or trades & not being able to use their minds & hands to create, invent, manufacture & produce?

Are you fine with them not being able to apply their education to the real world?
